Author Index—Volume 42 (2002)

(The issue number is given in front of page numbers)

Arévalo, C., C. Führer and M. Selva, A collocation formulation of multistep methods for variable step-size extensions (1–3) 5–16

Borovykh, N., Stability in the numerical solution of the heat equation with nonlocal boundary conditions (1–3) 17–27

Brugnano, L. and C. Magherini, Blended implementation of block implicit methods for ODEs (1–3) 29–45

Bürgel, A., T. Grahs and Th. Sonar, From continuous recovery to discrete filtering in numerical approximations of conservation laws (1–3) 47–60

Cameron, F., M. Palmroth and R. Piché, Quasi stage order conditions for SDIRK methods (1–3) 61–75

Casas, F., see **Wensch, J.** (1–3) 465–472

Chan, R.P.K., P. Chartier and A. Murua, Post-projected Runge–Kutta methods for index-2 differential–algebraic equations (1–3) 77–94

Chartier, P., see **Chan, R.P.K.** (1–3) 77–94

Debrabant, K., see **Lucht, W.** (1–3) 297–314

Durán, A. and M.A. López-Marcos, Numerical behaviour of stable and unstable solitary waves (1–3) 95–116

England, R., R. Lamour and J. López-Estrada, Multiple shooting using a dichotomically stable integrator for solving differential–algebraic equations (1–3) 117–131

Faragó, I. and C. Palencia, Sharpening the estimate of the stability constant in the maximum-norm of the Crank–Nicolson scheme for the one-dimensional heat equation (1–3) 133–140

Führer, C., see **Arévalo, C.** (1–3) 5–16

García, A., P. Martín and A.B. González, New methods for oscillatory problems based on classical codes (1–3) 141–157

García, A., see **López, D.J.** (1–3) 285–295

Gerisch, A. and J.G. Verwer, Operator splitting and approximate factorization for taxis–diffusion–reaction models (1–3) 159–176

González, A.B., see **García, A.** (1–3) 141–157

Grahs, T., see **Bürgel, A.** (1–3) 47–60

Grossmann, C. and Z. Horváth, Construction of two-sided bounds for initial-boundary value problems (1–3) 177–187

Günther, M., see **Pulch, R.** (1–3) 397–409

Horváth, R., On the monotonicity conservation in numerical solutions of the heat equation (1–3) 189–199

Horváth, Z., see **Grossmann, C.** (1–3) 177–187

Hundsdorfer, W., Accuracy and stability of splitting with Stabilizing Corrections (1–3) 213–233

Iavernaro, F. and F. Mazzia, Parallel implicit predictor corrector methods (1–3) 235–250

in 't Hout, K.J., On the contractivity of implicit–explicit linear multistep methods (1–3) 201–212

0168-9274/2002 Published by Elsevier Science B.V. on behalf of IMACS.
PII: S0168-9274(02)00197-6

Jackiewicz, Z., Implementation of DIMSIMs for stiff differential systems (1–3) 251–267
Jackson, K.R. and N.S. Nedialkov, Some recent advances in validated methods for IVPs for ODEs (1–3) 269–284
Jia, Z., The refined harmonic Arnoldi method and an implicitly restarted refined algorithm for computing interior eigenpairs of large matrices (4) 489–512

Knoth, O., see **Wolke, R.** (1–3) 473–487

Lamour, R., see **England, R.** (1–3) 117–131
Liu, Z., Convergence of generalized relaxed multisplitting methods for symmetric positive definite matrices (4) 513–527
López, D.J., P. Martín and A. García, A variable-stepsize variable-order multistep method for the integration of perturbed linear problems (1–3) 285–295
López-Estrada, J., see **England, R.** (1–3) 117–131
López-Marcos, M.A., see **Durán, A.** (1–3) 95–116
Lucht, W. and K. Debrabant, On quasilinear PDAEs with convection: Applications, indices, numerical solution (1–3) 297–314

Magherini, C., see **Brugnano, L.** (1–3) 29– 45
Martín, P., see **García, A.** (1–3) 141–157
Martín, P., see **López, D.J.** (1–3) 285–295
März, R., Differential algebraic systems anew (1–3) 315–335
Mazzia, F. and I. Sgura, Numerical approximation of nonlinear BVPs by means of BVMs (1–3) 337–352
Mazzia, F., see **Iavernaro, F.** (1–3) 235–250
Miranville, A. and A.C. Muresan, Block incremental unknowns for anisotropic elliptic equations (4) 529–543
Muresan, A.C., see **Miranville, A.** (4) 529–543
Murua, A., see **Chan, R.P.K.** (1–3) 77– 94

Nedialkov, N.S., see **Jackson, K.R.** (1–3) 269–284

Ostermann, A., Stability of W-methods with applications to operator splitting and to geometric theory (1–3) 353–366
Ostermann, A. and M. Thalhammer, Convergence of Runge–Kutta methods for nonlinear parabolic equations (1–3) 367–380

Palencia, C., see **Faragó, I.** (1–3) 133–140
